The Formtek File Linking and Peer Association Extensions are now available for Alfresco 4.2.

The Formtek File Linking Extension allows a single document to be accessible from multiple locations without physically duplicating the document. A user who is able to edit the primary document is able to create a reference in any number of locations that links back to the physical document. Any changes made to the physical document or its metadata are immediately accessible from all referenced locations.

The Formtek Peer Association Extension makes it possible for associations to be established between documents within Alfresco Share. When an association is established, a visual confirmation of the association is provided in the View form of the document that created the association where it provides a link to each associated document by name.

The Formtek File Linking and Peer Association Extensions are two of several Formtek Extensions designed to increase the capabilities and productivity of your Alfresco implementation.
